### Now A Nematode Resistant Peach Stock !!

For years root nematode has taken a heavy toll of peach trees in the orchards of the Middle and Southern States, in many cases killing the trees and in others reducing the yields through loss of vigor so that the orchards had to be abandoned or removed.

After years of experimenting and study, we are now able to offer you our Improved Nematode Resistant Peach Seed, Yunnan free strain. This gives a root stock that is highly resistant to nematode, that goes into dormancy well, and that adapts itself well to growing conditions in the United States. Peach trees grown on this root stock are hardy, vigorous, and fast growing, and therefore should live longer and produce more peaches. We believe this root stock will be invaluable in coming years in growing better trees.

One large nursery has bought over half our seed crop the past three years!

Our prices are as follows:

No order accepted for less than  
one thousand seed.

1000-5000 seed @ *1 1/2 cents per seed*

5000 and up @ *one cent per seed*

All prices are f. o. b. Marshallville, and subject to prior sale.

Yours very truly,

Massee Place Nursery
